PROGRAMMING

I learned HTML and CSS programming fundamentals at CodeAcademy.com, SoloLearn.com, KhanAcademy.com and LearnCode.academy youtube channel. I can write simple web page in HTML and style it with CSS.

C programming basics I learned through CS50 course in edx.org learning platform. In C language I can write simple logical programs with *if/else, for, do, while* statements to do calculations, capitalize letters, encrypt text with Caesar cipher.

WORK EXPERIENCE

09/2016 – 12/2016   **PEIKKO**   **Constructor**

PEIKKO Lietuva is a construction steel manufacturer. In PEIKKO I was working in a small deltabeam modelers team of four people. My main task was modeling deltabeams with SolidWorks 3D, Excel and AutoCAD.

09/2015 – 09/2016   **KUPOLIS**   **Construction site manager**

In house renovation project I was construction site manager. My main tasks was to make sure that construction workers accomplish their tasks, construction materials calculation, construction work scheduling.

EDUCATION

2015/09 – 2017/01   **KTU**   **Master's degree in Construction Technology**

2010/09 – 2014/06   **VGTU**   **Bachelor's in Construction Technology**

PERSONAL SKILLS

I can work in a team on a big project, find solutions to problems, separate bigger tasks to smaller and accomplish them. I am communicative and faced with tough challenges I can consult with colleagues if needed.

I can also work alone and make tough decisions. In my past I never was afraid of responsibility, I can work under heavy pressure and complete dificult tasks.

MOTIVATIONAL MESSAGE

Programming interested me from highschool times, but we never were introduced to programming basics in highschool. When free courses like CodeAcademy.com started showing up on the internet I started learning and creating a little bit of HTML, but because of intensive studies in university I never had chance to fully commit to it. So after I spent some time in construction sector and finished my Master studies I decided to fully commit myself to learn programming. At first I started learning C language in CS50 course that i found on edx.org learning platform, but i struggled alot and it took me alot of time to get little result. So I switched to HTML and CSS and so far I enjoyed it and I already created my resume page myself.
